

Main Features List – Voice AI Agent (Call Handling)

1. Authentication & User Management

- User Signup
- User Login
- Forgot Password / Reset Password
- Email Verification
- Profile Management (Update name, email, password, business details)
- Role-based Access (Admin / Team Member)

2. Homepage / Landing Page

- Hero section with clear value proposition
- Features overview
- How it works (3–4 steps)
- Pricing plans
- Testimonials / Use cases
- Call-to-Action (Start Free Trial / Book Demo)
- Footer with links

3. Dashboard (After Login)

- Overview / Analytics Cards (Total Calls, Booked Appointments, Conversion Rate, Avg Call Duration)
- Recent Calls list
- Quick Actions (Make Outbound Call, View Appointments, View Leads)
- Call volume charts (Daily / Weekly / Monthly)

4. Call Management

- Live Call Logs
- Call History with filters (Date, Status, Direction)
- Full Transcript view
- Call Recording playback
- Call Summary (AI generated)
- Lead Score (Hot / Warm / Cold)
- Notes & Tags on each call

5. Appointment Management

- View all appointments (Calendar + List view)
- Create / Edit / Cancel appointments
- Automatic confirmation messages
- Status tracking (Confirmed, Pending, Completed, Cancelled)

6. Lead Management

- Lead list with scoring
- Lead details page
- Filter by score, date, source
- Export leads (CSV)
- Manual lead creation

7. AI Agent Configuration

- Edit System Prompt
- Change First Message / Greeting
- Voice selection
- Working hours / After-hours behavior
- Knowledge Base / FAQ management
- Transfer rules (when to transfer to human)

8. Phone Number Management

- View assigned phone numbers
- Assign Assistant to phone number
- Outbound calling capability

9. Settings

- Business Profile (Name, Logo, Address, Timezone)
- Notification settings (Email / Slack alerts)
- Team members management
- API Keys & Webhooks
- Billing & Subscription

10. Notifications & Alerts

- New appointment booked
- Hot lead detected
- Missed call / Voicemail

- Daily / Weekly summary reports

Integration with Other Platforms

Platform	Purpose	Priority
Vapi.ai	Core Voice AI engine (must-have)	Critical
Google Calendar	Book & check appointment availability	High
Calendly	Alternative appointment booking	High
Twilio	Phone numbers (if not using Vapi numbers)	Medium
HubSpot	Sync leads & contacts	High
Salesforce	Enterprise CRM sync	Medium
Zapier / Make.com	Connect with 5000+ apps easily	High
Slack	Real-time notifications	High
WhatsApp Business	Send confirmation messages	Medium
Gmail / Outlook	Send email confirmations & follow-ups	High
Stripe	Subscription billing & payments	High
Google Sheets	Simple data export / reporting	Low
Notion	Optional knowledge base	Low
Zoom / Google Meet	Generate meeting links for appointments	Medium

Recommended Priority Integrations for MVP:

1. Vapi.ai (core)
2. Google Calendar
3. Stripe (for billing)
4. Slack (notifications)
5. HubSpot or simple CRM sync
6. Zapier (for flexibility)

Here's the best and most practical way using your current stack (**React + Node.js + MongoDB**):

Recommended Architecture (Web + Mobile)

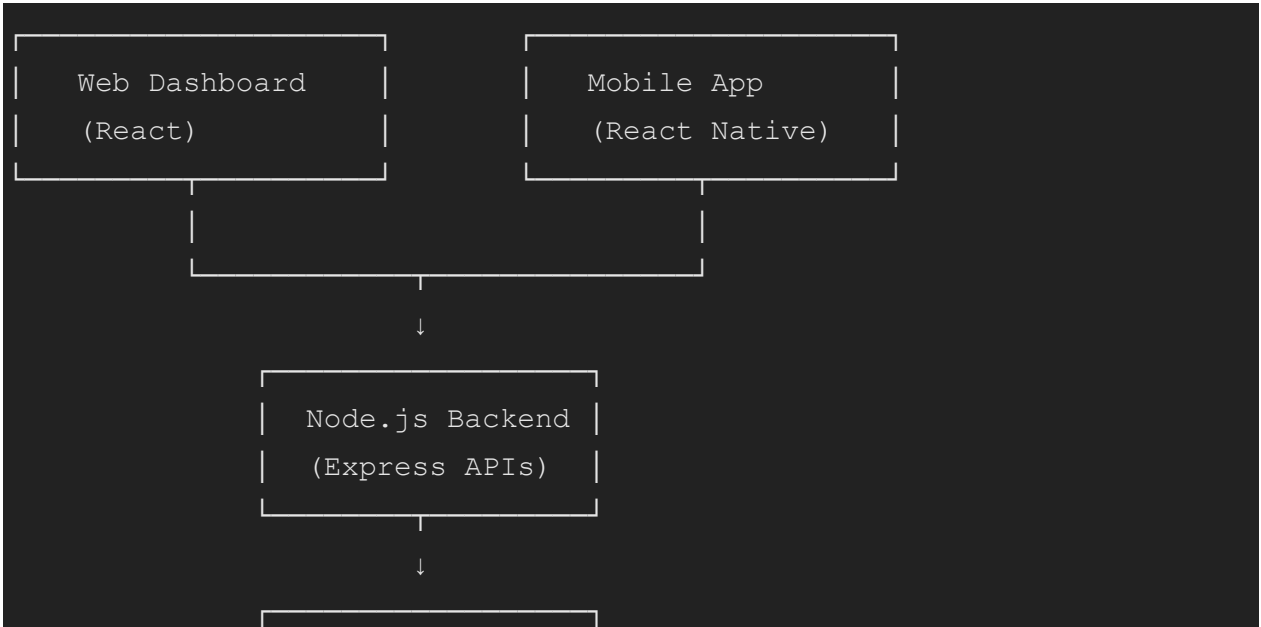

Part	Technology	Purpose	Recommendation
Web Dashboard	React (Vite or Next.js)	Full admin panel for desktop/laptop	Must have (MVP)
Mobile App	React Native + Expo	Mobile app for Android + iOS	Strongly recommended
Backend	Node.js + Express	Shared API for both Web & Mobile	Single backend
Database	MongoDB	Shared database	Same for both
Voice Agent	Vapi.ai	Handles phone calls	Same for both

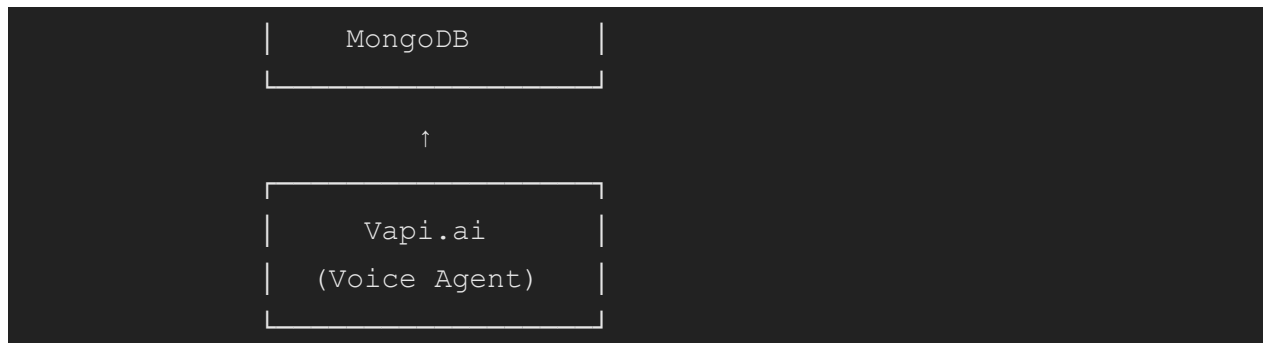

Why React Native + Expo is Best for You

- You already know React → learning curve is low
- One codebase → Android + iOS
- Can share a lot of logic, types, and even some UI components with the web app
- Expo makes development and building very easy
- Faster than learning Flutter or native development

How the System Will Work

text

Both Web and Mobile will use the **same backend APIs**.

Features Distribution

Feature	Web Dashboard	Mobile App
Login / Signup	Yes	Yes
Full Analytics & Reports	Yes	Limited
Call Logs + Transcripts	Yes	Yes
Appointment Management	Yes	Yes
Lead Management	Yes	Yes
AI Agent Configuration	Yes	Limited
Make Outbound Call	Yes	Yes
Push Notifications	No	Yes
Receive Call Alerts	Email/Slack	Push

Development Recommendation (Smart Order)

1. **First build the Backend** (Node.js + MongoDB + Vapi webhooks)
2. **Then build Web Dashboard** (React) → This becomes your main product
3. **Afterwards build Mobile App** (React Native + Expo) using the same APIs

This way you don't waste time and can start selling the web version earlier.

Summary

- Yes, you can have **both Web + Mobile App**
- Best combination for you:
React (Web) + React Native/Expo (Mobile) + Node.js + MongoDB

- One backend will serve both platforms
